

## Step 2 Flat Ironing Instructions

During the flat-ironing portion of **Magic Sleek Step 2** creating tension while flat ironing is essential to the results of the treatment.

**Tension:** (*noun*) the state of being stretched tight.

When flat ironing, you should feel tension in the muscles of your upper arm as you're passing over each section. Create your tension, and then pull the iron downward starting from the root, keeping your hair sections pulled taut. Your motion should be a fluid and steady sweep, focusing on the root with the most tension, and then later joining sections together to pass over with tension the ends. The joining of sections helps to protect the more fragile parts of hair from damage.

For best results, we recommend the Magic Sleek Pro Titanium Iron, as it was developed specifically for the Magic Sleek Treatment.

Your flat iron should be set to 450 (F), or as high as the hair can bear. For best results, we recommend using the Magic Sleek Pro Titanium Iron.

- For straightest results: Pass over each section 20-30 x
- To remove frizz: Pass over each section 10-20 x
- To redefine curls: Pass over each section 5-10 x
