Section 8: Exposure Controls/Personal Protection

OSHA Permissible Exposure Limits

Chemical Name	OSHA PEL	ACGIH TLV (TWA)
-	-	-

The TWA exposure value is the average airborne concentration of a particular substance when calculated over a normal 8 hour working day for a 5 day working week. The STEL (Short Term Exposure Limit) is an exposure value that may be equaled (but should not be exceeded) for no longer than 15 minutes and should not be repeated more than 4 times per day. There should be at least 60 minutes between successive exposures at the STEL. The term "peak" is used when the TWA limit, because of the rapid action of the substance, should never be exceeded, even briefly.

Appropriate engineering controls: Good general ventilation is sufficient to control worker exposure to airborne contaminants. Ensure appropriate decontamination equipment is available

Respiratory Protection: Not applicable under normal conditions

Skin Protection: Resistant Plastic or rubber gloves.

Eye Protection: Safety glasses or goggles.
